

CROSSCALL TREKKER-X4

LIVE INTENSELY

With a lens and functions worthy of the best action cams, the TREKKER-X4 was designed to accompany you on your most extreme expeditions but also to capture them. Thanks to its dedicated application, X-CAM, you can create your stories while filming, editing and sharing your achievements easily, and above all, instantly.

Its intuitive use, its reinforcement, its shock resistance and its waterproofness also make it very comfortable to use, turning it into an everyday smartphone that is always ready for action, whether it's at the other end of world or in your basement.

WATERPROOF

With its IP68 certification, the TREKKER-X4 is impermeable to all solids as well as liquids. In salty water as well as in chlorinated swimming pools, it can be immersed for 1 hour up to 2 metres deep and you can even take it with you for water-based activities involving serious amounts of splashing. Jet-skiing, kayaking, snorkelling, you can enjoy everything without having to worry about your TREKKER-X4.

DURABLE AND TOUGH

With durability like this, there's no doubt that it's a CROSSCALL. Its reinforced Corning™ Gorilla™ Glass 5 on the back and front won't crack or break on impact. Its structure is mounted on bushing and absorbs shocks, and includes fibreglass, an internal magnesium metal plate, aluminium side bars and reinforced corners... Its durability has been proven since the TREKKER-X4 has the highest

pass rate for the MIL-STD military standard tests for any smartphone from the brand. The MIL-STD military standard is US Army-created examination to replicate actual conditions of use for electronic appliances in the field, in extreme conditions.

AUTONOMY

With its 4,400mAh battery, the TREKKER-X4 pushes back the boundaries to allow you to enjoy its features and its camera for as long as possible and even more besides, thanks to its outdoor continuous use energy saving mode. It quickly regains its battery with optimised QC 3.0 charging and a shielded USB-C cable that comes in its own box. It is also compatible with intuitive charging accessories that extend

its life, such as the X-POWER, a charging station with a 5,000mAh external battery and the X-CAR, to charge your smartphone by the end of your journey.

PHOTO

The TREKKER-X4 was designed in partnership with recognised experts in image processing. Performance and image quality have been improved at every step of its development to achieve unprecedented precision. It has excellent photo quality (dual 12 MP LARGE PIXEL) thanks to its dual camera and its ultrafast autofocuses; a hybrid autofocus (PDAF, optimal in high brightness) and a laser autofocus (optimal in low light).

FULL HD SCREEN

Its full HD resolution (1920 x 1080 pixels) gives it a precision display down to the smallest detail. A 5.5" screen for that is very comfortable to use both when dealing with everyday messages and when appreciating your best videos.

DIGITAL SECURITY

Biometric technology helps secure your phone by giving you the ability to unlock your phone very quickly through fingerprint recognition. A secure, simple and practical solution.

DESIGN

The TREKKER-X4 sports a sleek and sporty design and incorporates the very best features of a wide angle action cam in just 12.85 millimetres of thickness. The curved lines and the sanded aluminium side bars of the smartphone make it easy to handle. Its anodised chamfers are designed for reinforced wear and shock resistance. The light is thus reflected across various surface types, creating a harmonious and attractive interplay between the different materials. The perfect compromise between hard-wearing materials and design, the TREKKER-X4 is ideal both for town use and in the mountains!

X-LINK

The magnetic connector on the back of your smartphone is designed so you can fix and connect it in one single movement to the exclusive X-LINK™ accessories.
